

## Exercice

---

Mettre chacun des nombres complexes sous forme algébrique :

$$- z_1 = 2(6 - 5i) - 3(4 + i)$$

$$- z_2 = (5 + 3i)^2$$

$$- z_3 = (3 - 2i)(3 + 2i)$$

$$- z_4 = (1 + i)^2$$

$$- z_5 = (1 + i)^4$$

$$- z_6 = (1 + i)^{10}$$

## Correction :

$$z_1 = 2(6 - 5i) - 3(4 + i)$$

$$z_1 = -13i$$

$$z_3 = (3 - 2i)(3 + 2i)$$

$$z_3 = 9 - 4i^2$$

$$z_3 = 13$$

$$z_5 = (1 + i)^4$$

$$z_5 = [(1 + i)^2]^2$$

$$z_5 = (2i)^2$$

$$z_5 = -4$$

$$z_2 = (5 + 3i)^2$$

$$z_2 = 25 + 30i + 9i^2$$

$$z_2 = 16 + 30i$$

$$z_4 = (1 + i)^2$$

$$z_4 = 1^2 + 2i + i^2$$

$$z_4 = 2i$$

$$z_6 = (1 + i)^{10}$$

$$z_6 = [(1 + i)^2]^5$$

$$z_6 = (2i)^5$$

$$z_6 = 32i$$
